COUNTRY CLUB

CAPE COD, MASSACHUSETTS

PRODUCT USED

SL-SPT-20W-G2
SOLAR AREA LIGHT

DISTRIBUTOR

ATLANTIC ELECTRICAL CO
NAHANT, MA

CONSULTANT

THE ENERGY EFFICIENCY
GROUP
NORWOOD, MA

SITUATION

The country club w/ multiple golf courses and tennis facilities was in need of updated lighting. Existing lighting was comprised of natural gas lanterns which meant there was no electricity running to the poles. These lanterns were outdated, inefficient and dim. Residents and members feared for their safety due to inadequate lighting.

SOLUTION

The old glass lanterns were replaced with Solar Post Top Fixtures (SL-SPT-G2) throughout the country club.

RESULTS

With the new off-grid solar post top lights, the country club now has the perfect blend of visual elegance and light output along with easy low-cost installation. Due to the upgrade in off-grid technology, **"THESE SOLAR FIXTURES SOLVED A MAJOR SAFETY CONCERN THAT OUR RESIDENTS HAD."** Ultimately, the country club chose to use Solera based on its high quality off-grid products that require no digging or trenching to install.
