

PROJECT

Unique Church Bowl Fixtures

LOCATION

Immaculate Conception Church
Hendersonville, NC

PRODUCT

RPT-P-LEDSR-9IN x 3 per bowl
RPT-P-LEDCR-9IN x 1 per bowl
RET-P-LEDSR-4IN x 1 per sconce

SITUATION

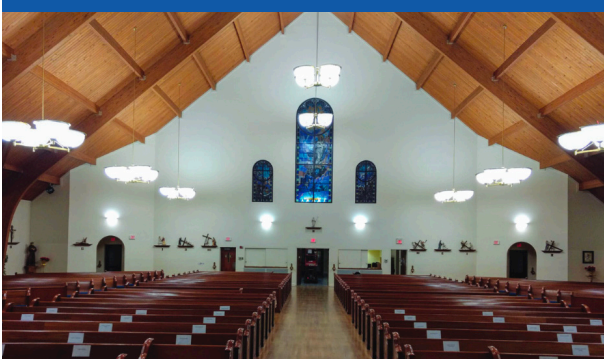

The church wanted to keep their beautiful existing pendant and sconce fixtures, but wanted to upgrade to LED and add dimming controls. Fixture maintenance above the pews is very cumbersome.

SOLUTION

The 9" circular drum retrofit was custom fitted inside each bowl to provide uplight. The 9" sconce retrofit x 3 were installed in each bowl to provide downlight and the desired footcandle increase on the ground. Finally, the 4" sconce retrofit was installed in sconce fixtures located throughout the church.

RESULT

Pendant fixtures with unique bowl design went from over 1000W each down to 268W. Light levels drastically improved while adding dimming and scene control for special events. The entire church now has maintenance free, feature-rich lighting.

"we were able to increase foot candles while drastically reducing their lighting bill"

– Rick Bacca, LFD

"we did not want new fixtures, but desired dimming and scene control"

– Immaculate Conception Church
