PRODUCT USED

LBI-Linear Barkit Internal Driver

ACCESSORIES USED
Seamless Connector

Suspended In-Line Kit

SITUATION

In 2019, Jackson Mitchell of Mitchell Grocery Corp purchased Little Giant Farmers Market and wanted to update the branch's lighting. The grocery store was previously fitted with outdated tube, directional, and case lighting. The RemPhos Linear Barkit Internal Driver (LBI) was chosen to retrofit the space.

SOLUTION

The existing lighting was removed and the grocery store was retrofitted with a total of (280) 4 FT LBIs, instantly increasing the overall illumination. Seamless connectors and suspended in-line kits were used to seamlessly retrofit the LBI throughout the store.

RESULT

With the flexible installation options and wide selection of accessories available for the LBI, Little Giant stores are brighter and more welcoming to customers while also being more energy efficient. The transformation was striking—what began as a standard upgrade became a standout installation, delivering uniform, high-quality lighting that elevated the entire store. The contrast between the before and after is undeniable: brighter, more inviting, and visually refined. Ultimately, Little Giant chose to use RemPhos for its unique products that offer incredible energy savings.
